## WHY CYCBER SECURITY ?

- As technology advances, so do the threats; it is harder than ever to protect business processes and information.
- Clients expect their data and their assets to be secure, and services to be available.
- The risk of losing customer trust is significant and rising: 82% of customers would consider leaving an institution that suffered a data breach.
- Safeguarding intellectual property, financial information, and a company's reputation is fundamental to business strategy.
- Data breaches are expected to reach \$2.1 trillion globally by 2019.
